

Theodore (Ted) White, Ph.D.

Dr. White (B.S. Cornell University '78, Ph.D. University of Michigan '84) first worked with pathogenic fungi with Dr. Nina Agabian in San Francisco, working on proteinases in *Candida albicans*. Ted then developed an independent research program on azole drug resistance in *Candida albicans* in 1993, and has been funded ever since. He has worked with *Candida* species, *Cryptococcus*, *Aspergillus*, dermatophytes and *Saccharomyces*. He was an Assistant / Associate / Full Professor the Seattle Biomedical Research Institute and the University of Washington from 1996-2011. Recently, Ted moved to the University of Missouri at Kansas City as the Marion Merrell Dow Professor and Division Head of the Cell Biology and Biophysics Division of the School of Biological Sciences.

Ted is a Fellow of the American Academy of Microbiology. He was an ASM Waksman Lecturer, a Burroughs Wellcome New Investigator in Molecular Mycology and an M. J. Murdock Charitable Trust New Investigator. Ted has served for 15 years as a faculty member at the Molecular Mycology course at Woods Hole. He is a leader in the current dermatophyte sequencing efforts.

Ted served as the American Society for Microbiology Division F Chair (2005-2006, as well as Chair-Elect and Past Chair) and has served as ASM At-Large Councilor (2008-2010). He served on the program committee for the ASM Conference on *Candida* and Candidiasis for three meetings. He served for six years on the NIH Study Section on Aids Related Opportunistic Infections. He serves on editorial boards of several journals including Eukaryotic Cell.
